The side effects listed below are those that occur most frequently. Other side effects may occur; please contact your doctor or oncology nurse to report any medical problems.

Dose _____

FLUDARABINE (Fludara®)

Early Side Effects

- a. You may have chills and fever, nausea, vomiting or diarrhea.
- b. You might also have feelings of fatigue, weakness, lack of energy and decreased appetite.

Late Side Effects

A drop in blood cell counts will occur. The white blood cells will drop within 7 - 14 days of treatment. The drop in red blood cells and platelets will occur sometime later. Your doctor will require routine blood tests to monitor your progress.
